

U.S. Patent No. 10,583,703

CUSTOM ALLOY VALVE STEM CAPS

- Complement wheels and tires with our superior design tire valve stem caps.
- We print your logo on a high quality polyester base and seal it beneath a crystal clear, UV protective polyurethane dome that will not yellow, peel, chip, or fade.
- Our Patented Design is precision machined from high-grade alloy with an ABS internal thread shield to protect from the risk of corrosion or rust around your tire valve stem.
- An inner over-molded o-ring seal protects the tire's valve orifice from dirt, dust and debris.
- Ergonomic knurled head design makes caps easy to install and remove without a wrench.
- Available in two anodized finishes semi-gloss black and bright natural satin.

Why ABS Internal Thread Shield?

For years the use of alloy valve stem caps was inhibited by the risk of corrosion and seizure due to galvanic reaction between metals. Our patented ABS internal thread shield eliminates metal-on-metal contact and risk of seizure by encapsulating the valve stem threads in lightweight, inert ABS that has been tested for compatibility with Tire Pressure Monitoring Systems and overall wheel balance. The result is a valve stem cap that outperforms any other metal cap in the industry.

WHY CHOOSE CAMISASCA VALVE STEM CAPS VERSUS THE COMPETITION?

- Fast turnaround from our Lake Forest, California manufacturing facilities.
- Machined & anodized aluminum that does not seize to the valve stem with our innovative patented ABS thread shield.
- Over Molded EPDM rubber valve seal cannot be dislodged, and keeps the valve orifice clean from dirt, dust and grime.
- Knurled head design ensures easy installation by hand without the need of a special tool or worries about overtightening.
- Detailed, color graphics and high quality polyester base material are sealed beneath a crystal clear, UV protective polyurethane dome that will not yellow, chip or fade.
- Makes a great gift or retail item, with a suggested retail value of \$24.95 per set.

CUSTOM VALVE STEM CAP PRICING
